

NATIONAL CYBER EMERGENCY RESPONSE TEAM
DEPLOYMENT REPORT

Name	Abdul Rehman
Assignment	01
Date	02/07/2026

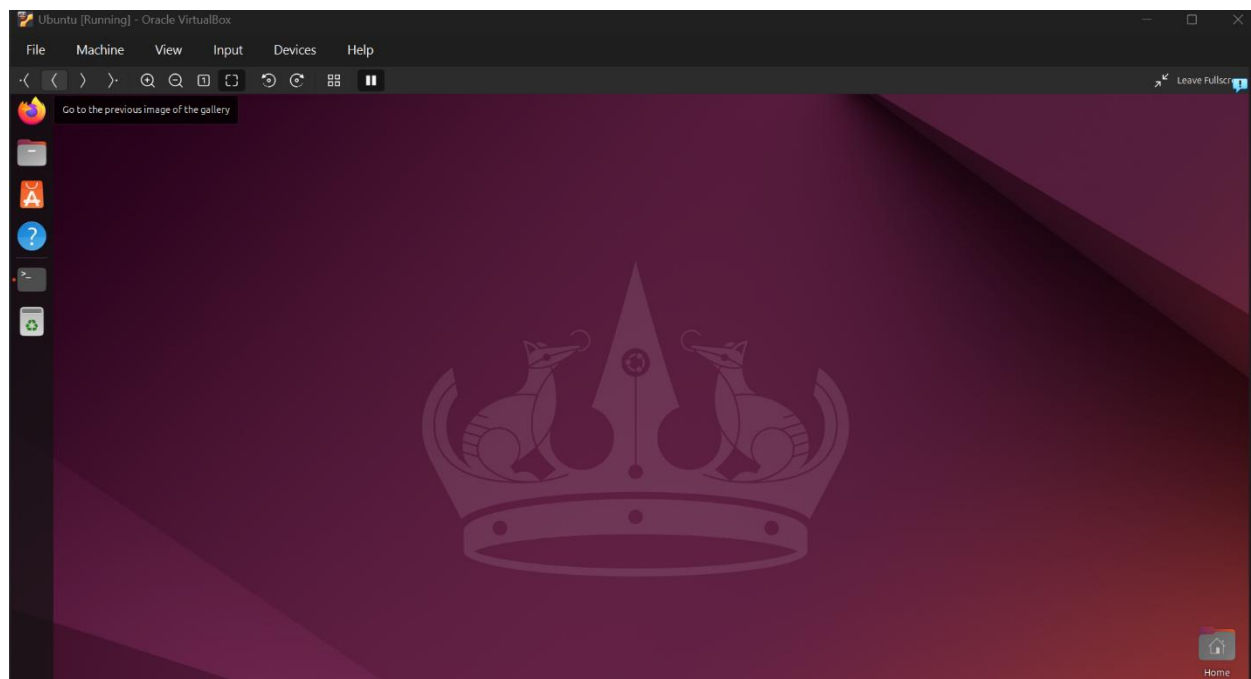

SOFTWARE REQUIREMENTS:

- Oracle VirtualBox
- Ubuntu 24.10 Desktop (Operating System Running on Virtual Box)
- Internet Connection
- Nginx (Latest Version)

1. Screenshots

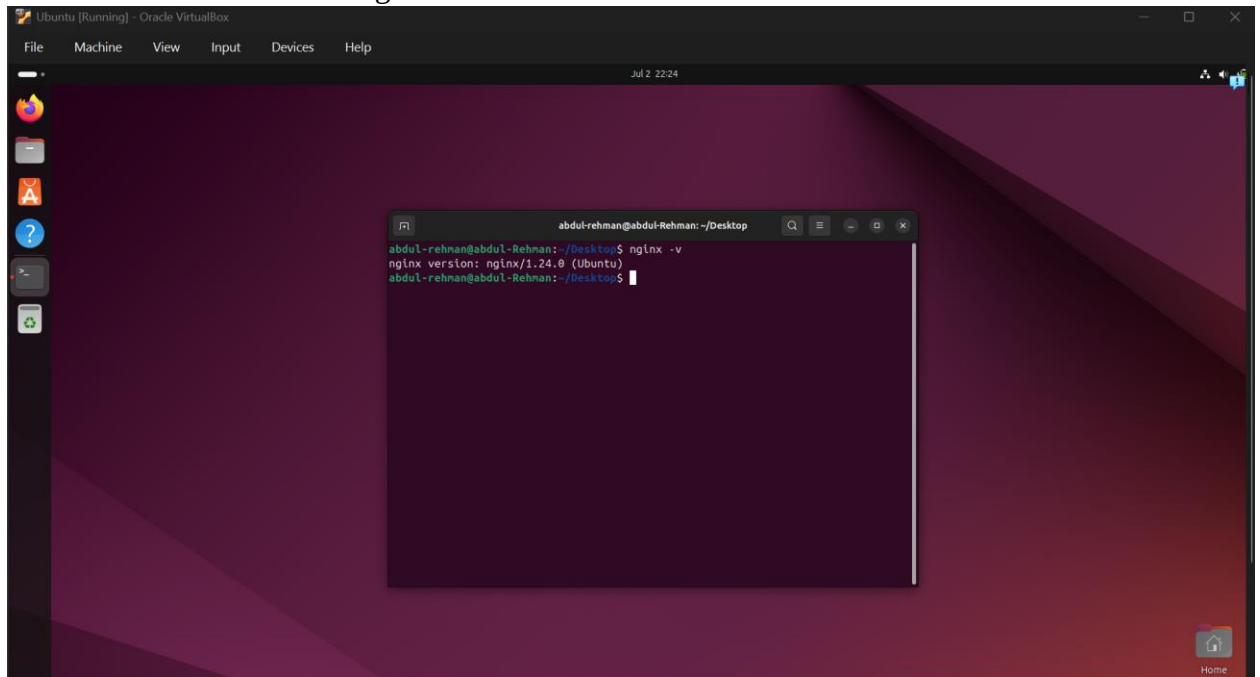

1.1 Ubuntu Desktop:

The screenshot shows that Ubuntu 24.10 is successfully installed on Virtual Box.

1.2 Nginx Installation:

The screenshot shows that Nginx is installed and its version is also shown.

1.3 Website Running Successfully on PORT 8080:

The screenshot shows NCERT landing Page Successfully running on Local Host 8080.

2.Learning, Challenges, and Solutions

Learning

- Learned how to create and configure an Ubuntu virtual machine in VirtualBox.
- Learned to install the Nginx web server using commands like `sudo apt install nginx -y` and verify it using `sudo systemctl status nginx`.
- Learned how to edit the Nginx configuration to change the server port from **80** to **8080** and host a custom HTML webpage.
- Improved my understanding of basic Linux terminal commands and file management.

Challenges

- Faced black and white screen issues after installing Ubuntu due to VirtualBox graphics settings.
- Initially found it difficult to configure Nginx and understand Linux terminal commands.
- Encountered file path errors while copying the HTML file to the Nginx web directory.

Solutions

- Fixed the graphics issue by selecting **VMSVGA** and disabling **3D Acceleration** in VirtualBox.
- Used `sudo nginx -t` to verify the Nginx configuration before restarting the service, which helped identify configuration errors.
- Used the correct file path with the `cp` command and reloaded Nginx successfully to display the custom website.
